

ASCOBANS workshop on management of MPAs for Small Cetaceans

Inf2.5c

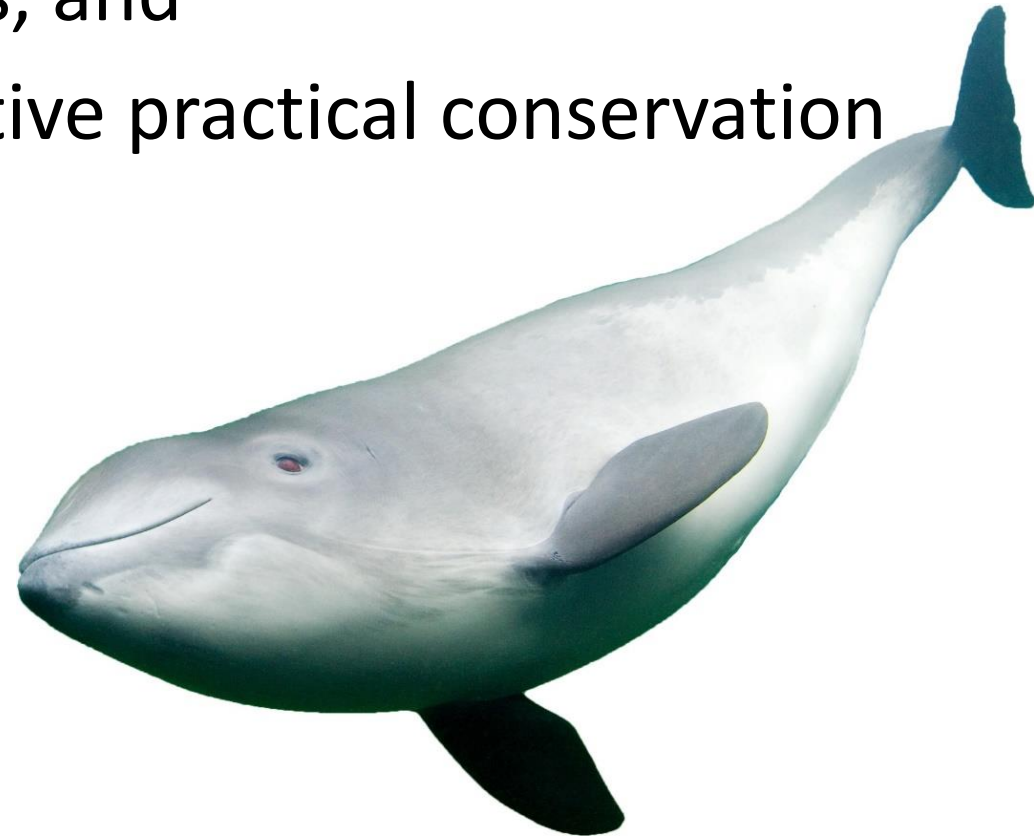

Ida Carlén
ida.carlen@ccb.se

Objectives of the workshop

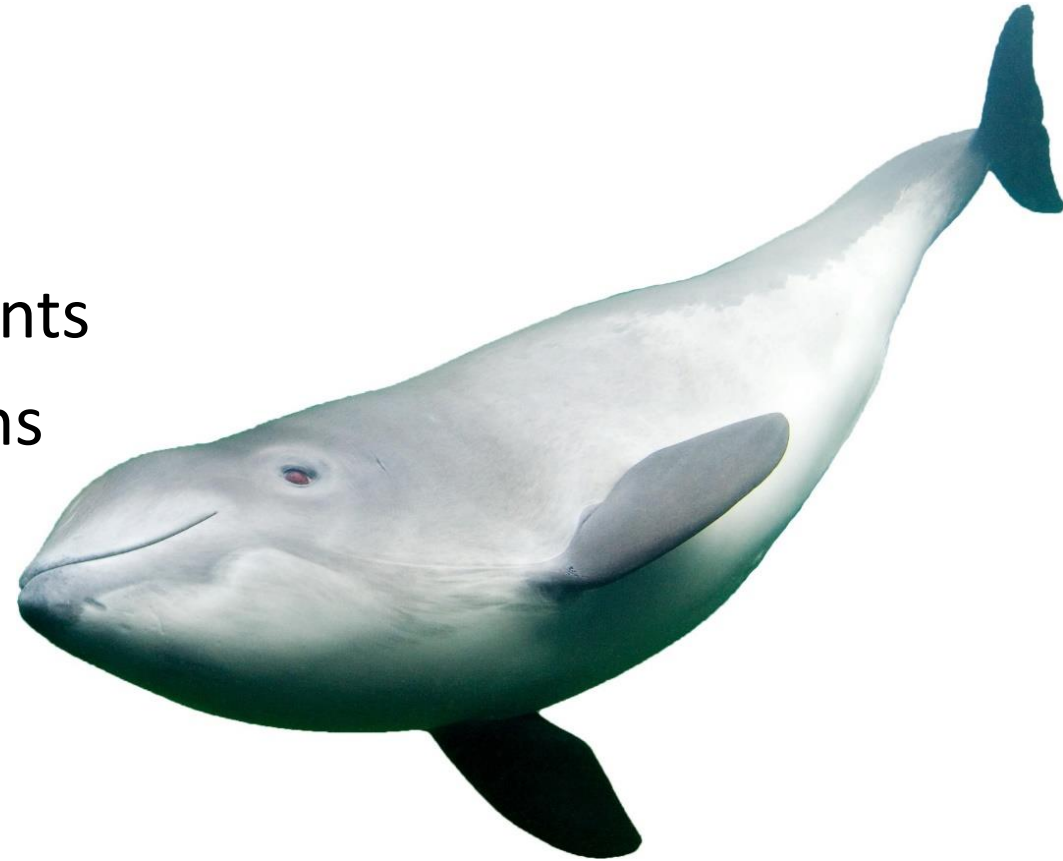

To discuss and make recommendations on

- 1) criteria and clear options for well-formulated conservation objectives for small cetacean MPAs, and
- 2) a toolbox of ambitious and innovative practical conservation measures for small cetacean MPAs

Threats

- Bycatch
- Impulsive/acute underwater noise
- Continuous/chronic underwater noise
- Prey depletion
- Environmental contaminants and pollutants
- Disturbance from the presence of humans
- Habitat quality

Conservation objectives

SMART – Specific, Measureable, Achievable, Results-oriented, Time-limited

- Suggesting ambitious draft ideas
- Choosing a few and re-wording to well-formulated

By 20xx the relative abundance of
species during the *period/season*
has increased from x to y within *site*.

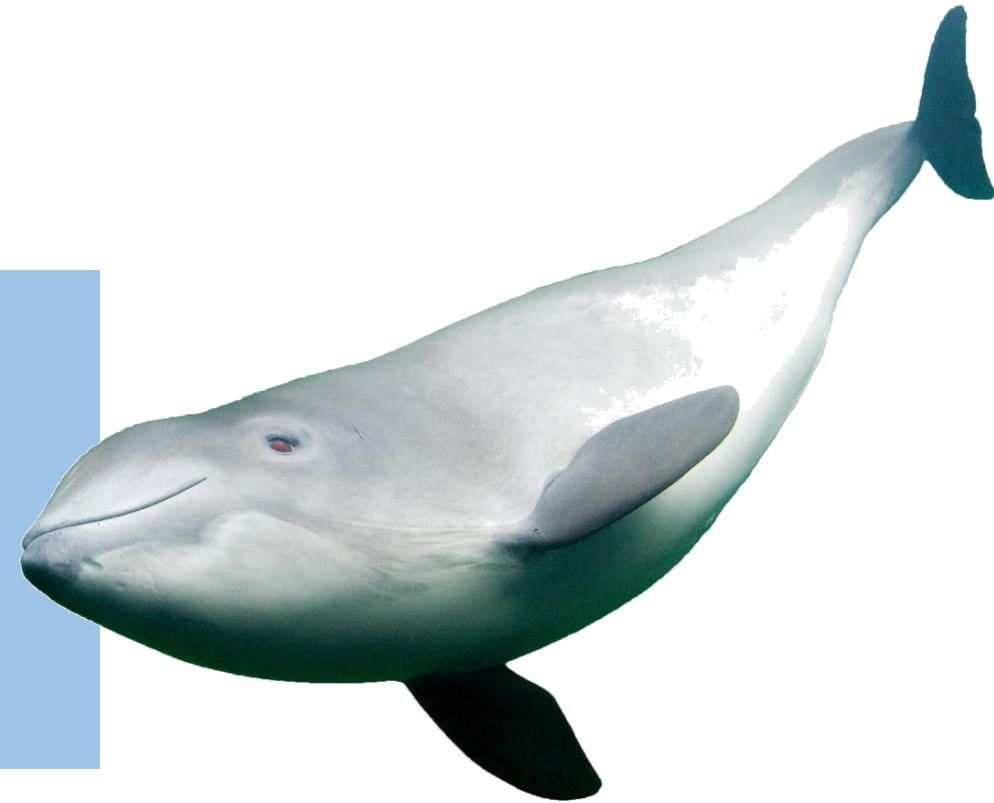

Conservation measures

Ambitious and innovative examples of practical conservation measures

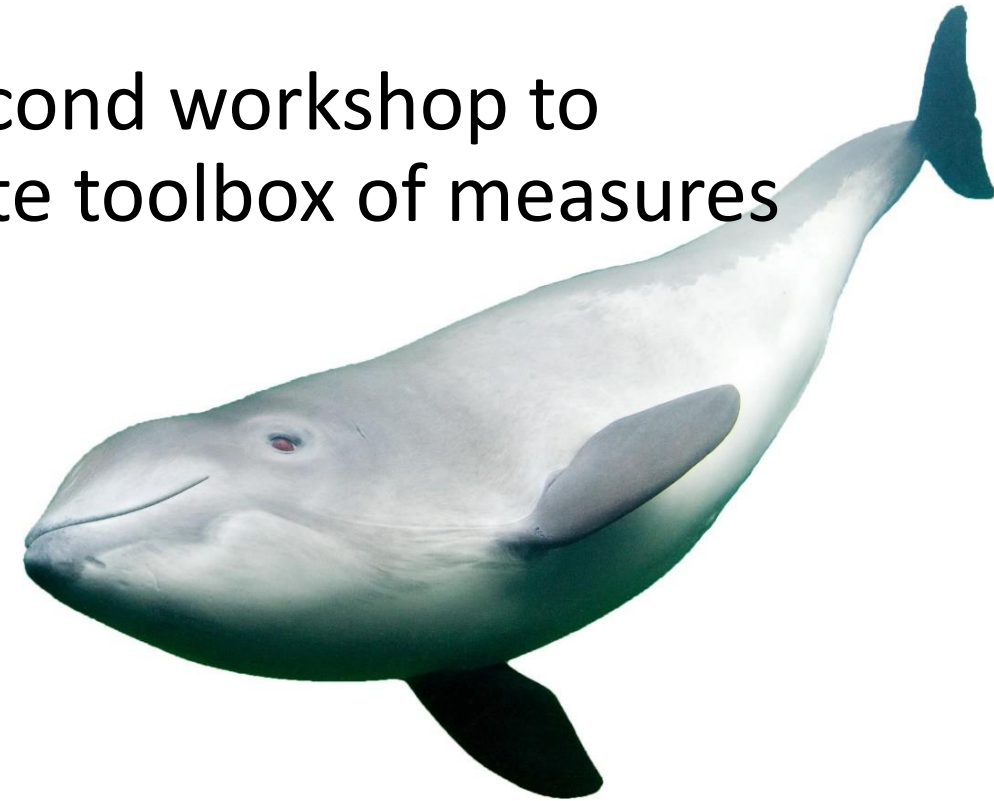

- Creating situation models – what leads to the threats?
- Drafting measures
- Prioritizing and specifying

Establish and enforce mandatory use of effective mitigation measures (e.g. bubble curtains, soft start, etc.) during construction and other noise-emitting activities, within MPAs and their buffer zone

What's next?

- We have a good start of the envisioned toolbox
 - All participants agreed that we did not have enough time
- We would very much like to do a second workshop to eventually end up with a more complete toolbox of measures

Thanks!!

- Participants
- Organising committee
- Financiers
